

# MedReady+

Your simple solution for medication dispensing at home

MedReady+ makes medication management easy and affordable. If your clients have problems taking their medications on time, or correctly, MedReady+ can provide the consistency and reliability to keep them independent. MedReady+ works best for clients who are non-compliant due to moderate confusion, or memory issues.

## MedReady+ features

- Dispenses up to four doses per day
- AC-powered with battery backup
- Easily accessible medication door
- Lockable to prevent double dosing
- Audible and visual alerts
- Easy-to-read LED clock
- Compatible with CareLink™

## MedReady+ with supervision

The Senior Health Advantage Network has equipped each MedReady+ with a wireless interface, allowing it to communicate with trained CareLink personal emergency response units.

Any time the client is noncompliant, the MedReady+ alerts the CareLink unit. The CareLink automatically calls our 24/7 Support Center attendants, who can then talk directly to the client through the CareLink and determine if the client needs help with his or her medications.
