

SimpleMed

Smart care the simple way.

SimpleMed

The Right Dose at the Right Time

SimpleMed is an advanced weekly medication organizer designed for home use. It simplifies the task of managing multiple medications and helps ensure the right medications are taken at the right time. It's a great way to effectively manage medications for a loved one.

User Friendly

Ergonomically designed - SimpleMed is as easy to use as a pill box, and provides a new level of medication management and supervision. Setup is quick and easy.

Information & Reminders

A display screen provides important information and instructions such as "Take before meals". The system can direct users to take medications not stored in the SimpleMed, such as eye drops or insulin. Custom messages can be created and monitored for compliance.

Monitoring & Reporting

If a dose is missed, or an attempt made to take medications from the wrong compartment, the internal alarm sounds and instructions are displayed on the message screen. Compliance information may be recorded and stored for review by clinicians or family members.

Subscription Service

The SimpleMed works great as a stand alone pill organizer, but its most powerful protection is afforded through the optional monitoring service. This provides outbound notifications via text messages or email in response to recognized problems such as missed dose or wrong compartment opened. An advanced twoway voice communication feature allows users to quickly connect to a caregiver if they have any questions or concerns.

Peace of Mind

Taking medications consistently on time can make a significant difference in ones health and well-being. Knowing the right medications are being taken at the right time provides peace of mind for the whole family.

***The right dose
at the right time.***

SimpleMed is unique ... designed to help simplify the important task of managing a loved one's medications whether they are miles away or living in your home. The simple, smart design makes it easy to use, while its ability to keep you informed provides peace of mind for the entire family.

Studies show that nearly 70 percent of people over 65 make mistakes in following their medication regimens. And it's no wonder when you consider our increasing reliance on a growing number of pills ... prescription and non-prescription.

Though medication regimen errors are common, their consequences can be serious. Inability to self-medicate accounts for nearly 25 percent of nursing home admissions and 10 percent of hospital admissions among people 65 and older. Thankfully, SimpleMed offers a simple, reliable solution.

Easy Installation and Set-up

The SimpleMed takes less than 5 minutes to setup and get started. Simply plug it into household power and a standard phone line.

After setup and quick scheduling the unit is loaded like a normal pill box. It's sleek, low profile design allows it to be kept in the kitchen, bathroom, bedroom, or wherever it's convenient.

Fits easily into a daily routine

The SimpleMed provides up to 4 dispensings per day, 7 days per week. Its compartments are very easy to use and refill. Messages on the screen can display important reminder messages. Additional features like "early dose" make the SimpleMed flexible enough for any schedule.

Reliable and Convenient

The appropriate compartment illuminates one hour prior to a scheduled dose. If the appropriate compartment hasn't been opened during this hour a musical reminder alarm will sound from the SimpleMed unit. Opening the compartment turns off the reminder light and alert tone. Using our optional monitoring service, if an hour passes without the compartment being opened, SimpleMed alerts the data center, causing an email and/or text message to be sent to the caregiver. This information is documented on a secure website, accessed with permission by the caregiver. This information can be critically important when a doctor is deciding on dosage adjustments.

Family Access Anywhere

With the client's permission, health care providers or family members can log onto a secure Internet site and view information recorded by SimpleMed.

An illuminated light helps identify which medication lid to open

Text messages and Email alerts can be sent to caregivers

Easy to use pill compartments

Audible alerts

Easy to use buttons

Bright easy to read display

Help button allows immediate 2-way voice calls to caregivers

Studies show that nearly 70 percent of people over 65 make mistakes in following their medication regimens. 25% of all nursing home admissions are related to improper medication management.
